

BLAZE

Your Challenge, **Our** Solution

PowerZone™ Connect & Dante®

Upgrade your audio systems with our Dante®-enabled PowerZone™ Connect amplifier series, empowering integrators with the tools necessary to create exceptional, high-quality audio experiences and flexible solutions using Ethernet network connections.

**Route
anything,
anywhere**

Capabilities

- Superior Flexibility
- Deployment Simplicity
- Dante® Software Ready
- Professional Audio Quality (44.1 / 48 kHz)
- 4x4 channel I/O
- Ultra Low Latency
- Scalable

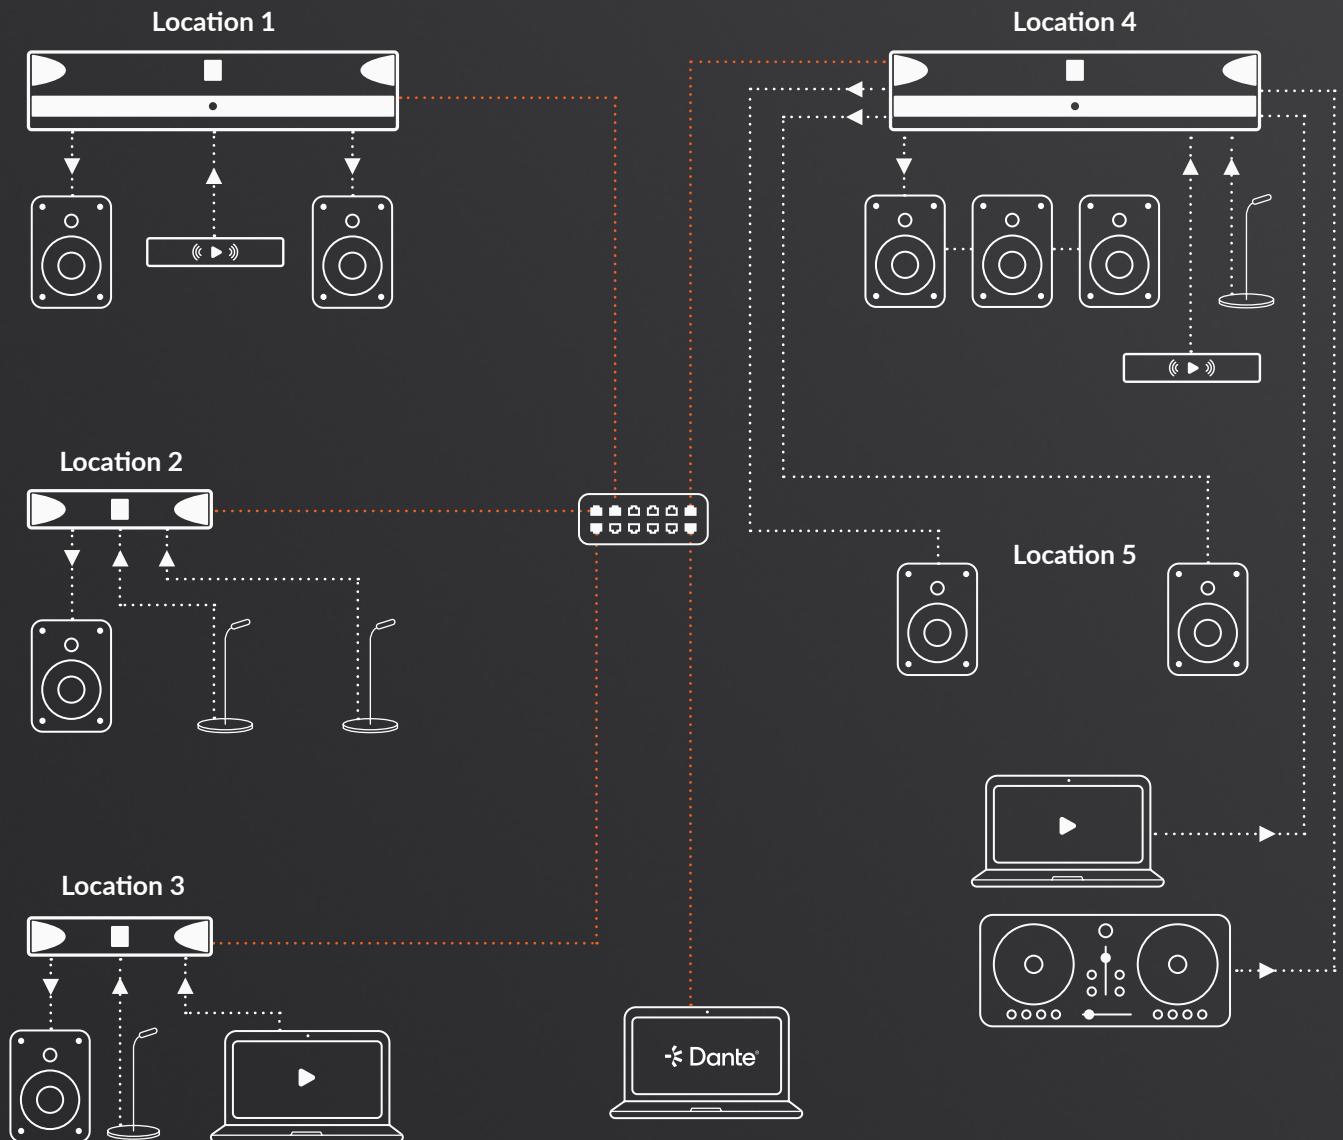

What is Dante®

Dante® facilitates connections through an IP network, transmitting multiple high-quality audio channels over a single Ethernet cable.

All connections are managed via the Dante Controller featuring instant routing, enabling seamless signal transmission without physically changing cables.

All AV devices are part of the same network, signals can effortlessly travel between them, regardless of their locations on the site.

- ✓ Uncompressed, low-latency digital audio transmission.
- ✓ Plug & Play scalability on existing or new networks.
- ✓ Single-click label-based routing with Dante® Controller software.
- ✓ Immense channel counts via a single Cat5e or Cat6e cable, up to 328 feet.

Why Dante®

Cost Effective, Seamless Integration & Flexible Configuration

Dante®

Dante® Inside:

PowerZone™ Connect Dante variants are ready to go right out of the box without the need for additional hardware.

Network Hardware Agnostic:

Dante® networks do not require proprietary network switches for signal transmission and feature plug & play compatibility.

Premium Digital Signal Flow:

Multi-channel digital audio over a single Ethernet cable allows for a noise-free signal path over long distances with a default latency of 1 ms.

Flexible Routing:

Change signal routes in seconds without the need to reconfigure analog cables.

Empowering Integrators

The Blaze Audio PowerZone™ Connect ecosystem now empowers you with routing options, multi-zoning, signal path management, PowerZone™ DSP capabilities, centralized control, and the flexibility to make dynamic changes.
